

Audit Report for Block30 - January 11, 2021

## Summary

Audit Report prepared by Solidified covering the Blocks token smart contract.

## Process and Delivery

Two (2) independent Solidified experts performed an unbiased and isolated audit of the code below. The final debrief took place on January 11, 2020, and the results are presented here.

## Audited Files

The contract audited was deployed on the Ropsten testnet at address:

`0x7240aC91f01233BaAf8b064248E80feaA5912BA3`

The source code has been supplied in the form of Etherscan-verified source code:

<https://ropsten.etherscan.io/address/0xa9d95198a6c80f1f4115d688309328f862a5406b#code>

## Intended Behavior

The smart contract implements a token compliant with the ERC-777 standard with the following parameters:

- Symbol: BLOCKS
- Name: BLOCKS
- Default Operators: none

The total supply of the token is minted to the deployer's account during deployment.

## Findings

Smart contract audits are an important step to improve the security of smart contracts and can find many issues. However, auditing complex codebases has its limits and a remaining risk is present (see disclaimer).

Users of a smart contract system should exercise caution. In order to help with the evaluation of the remaining risk, we provide a measure of the following key indicators: **code complexity**, **code readability**, **level of documentation**, and **test coverage**.

Note, that high complexity or lower test coverage does not necessarily equate to a higher risk, although certain bugs are more easily detected in unit testing than a security audit and vice versa.

Criteria	Status	Comment
Code complexity	Low	-
Code readability and clarity	High	-
Level of Documentation	High	-
Test Coverage	High	Whilst no unit tests have been provided, the codebase uses Open Zeppelin's ERC-777 implementation, which is covered by an extensive test suite.

Audit Report for Block30 - January 11, 2021

## Critical Issues

---

No critical issues have been found.

## Major Issues

---

No critical issues have been found.

## Minor Issues

---

No critical issues have been found.

## Notes

---

No additional informational notes.

Audit Report for Block30 - January 11, 2021

## Disclaimer

Solidified audit is not a security warranty, investment advice, or an endorsement of Block30 or its products. This audit does not provide a security or correctness guarantee of the audited smart contract. Securing smart contracts is a multistep process, therefore running a bug bounty program as a complement to this audit is strongly recommended.

The individual audit reports are anonymized and combined during a debrief process, in order to provide an unbiased delivery and protect the auditors of Solidified platform from legal and financial liability.
